JC5519
SOK Glycoprotein precursor - chicken
C;Species: Gallus gallus (chicken)
C;Date: 02-Sep-1997 #sequence_revision 05-Sep-1997 #text_change 09-Jul-2004
C;Accession: JC5519
R;Hancox, K.A.; Gooley, A.A.; Jeffrey, P.L.
Mol. Brain Res. 44, 273-285, 1997
A;Title: AvGp56, a predominantly axonally expressed glycoprotein, is a member of the IgL
A;Reference number: JC5519; MUID:97225899; PMID:9073169
A;Accession: JC5519
A;Accession: JC5519

A,Note: the authors translated the codon AAA for residue 970 as Leu
C,Comment: NCAM mediates cell-cell adhesion via homophilic binding with another NCAM mol
C,Comment: Several forms of NCAM are produced by alternative splicing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C. "Cloning of neurotrimin defines a new subfamily of differentially expressed neural cell adhesion molecules.";

J. Neurosci. 15:2141-2156 (1995).

-!- FUNCTION: Neural cell adhesion molecule.

-!- SUBCELLULAR LOCATION: Cell membrane; lipid-anchor; GPI-anchor.

-!- DEVELOPMENTAL STAGE: Expressed at high levels in several developing projection systems: in neurons of the thalamus, subplace, and lower cortical laminae in the forebrain and in the post in neurons of the thalamus, subplace, and lower cortical laminae in the forebrain and in the bottom of the thalamus, subplace, and lower cortical laminae in the forebrain and in the bottom of the thalamus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SMART; SM00409; IG; 3.

W Tare members of the Ig superfamily and are related to OBCAM,

The control of the Ig superfamily and are related to OBCAM,

The control of the Ig superfamily and are related to OBCAM,

The control of the Ig superfamily and are related to OBCAM,

The control of the Ig superfamily cell membrane; Ilpid-anchor,

TISSUE SPECIFICITY: Restricted to the nervous system.

C. -- DEVELOPMENTAL STAGE: Increases during development from very low

CC --- DEVELOPMENTAL STAGE: Increases during development after hatching.

CC --- SIMILARITY: Belongs to the immunoglobulin superfamily: IgLON

Family.
